Forecast For The United Kingdom
Issued by Met Office Exeter
at 1400 on Wednesday 14 Apr 2021

UK Outlook for Monday 19 Apr 2021 to Wednesday 28 Apr 2021:
Cloudy and breezy across Northern Ireland and Scotland with outbreaks of rain through Monday, later spreading briefly to Wales, the South West and Northern England. Further southeast it will likely remain drier and brighter with a cold night. Outbreaks of rain in the north and west will then likely ease as high pressure becomes more widely established again. This will bring plenty of dry and bright weather with sunny spells and daytime temperatures around average, but cold by night with the risk of overnight frosts and the chance of fog patches. There is the potential for rain and strong winds to occur at times towards the northwest of the UK with the possibility of these unsettled conditions briefly spreading southeast.
